

A. Marketing Site

A1. Landing Page

Design the public landing page for OneAIAssist, a SaaS platform for deploying AI sales/support agents on WhatsApp. Follow the OneAIAssist design system (deep blue primary, teal accent, rounded cards, Inter typography).

Layout, top to bottom:

1. Nav bar: logo left, links (Features, Pricing, Use Cases, Contact), "Log in" text link, "Start Free Trial" primary button, all right-aligned
2. Hero section: large headline "Deploy AI Sales Agents on WhatsApp in Minutes," supporting subtext about lead gen + support automation, primary CTA button "Start Free Trial," secondary "Book a Demo" button, and an embedded live chat widget mockup on the right showing a sample WhatsApp conversation
3. Trust bar: three stat callouts – "2M+ conversations handled," "500+ businesses," "40+ countries"
4. Feature highlight grid: 6 cards with icon + short title + one-line description (AI Chatbot Engine, Live WhatsApp Inbox, Lead Pipeline & CRM, Broadcast Campaigns, Digital Marketing Automation, Analytics)
5. Use-case carousel: cards for Insurance, Healthcare, E-Commerce, each with a short "how it works for you" blurb
6. Testimonial section: 3 quote cards with company logo, name, role
7. Final CTA band: full-width teal section, "Ready to deploy your AI agent?" with "Start Free Trial" button
8. Footer: logo, links organized in columns (Product, Company, Legal, Support), social icons

Make it feel like a confident, established SaaS product – not a demo.

A2. Pricing Page
